

KJEFTEKNUSER BB 50

The compact benchtop model

The BB 50 is the smallest model of the RETSCH jaw crusher series and has been specially designed for sample preparation in the laboratory. The compact machine fits on any laboratory bench and offers safe and convenient handling.

The RETSCH jaw crusher series is available in 8 different sizes. Throughput and final fineness depend on the crusher type, selected gap width and breaking properties of the sample material.

Robust design, simple handling and cleaning are the features of the RETSCH jaw crusher models. Small amounts of sample are processed batchwise; for larger amounts the crushers can be operated continuously.

SUPERIORITY IN DETAIL

The BB 50 is designed for efficient and convenient size reduction. The variable speed can be set between 550 and 950 min⁻¹ to adapt the crushing process to sample requirements. The possibility to reverse the rotating direction is helpful if too much sample material has been fed to the crusher causing it to block. The simple push of a button restarts the process. Due to permanently lubricated bearings and its solid design, the BB 50 jaw crusher is virtually maintenance-free.

Fold-back hopper can be removed for easy access

Digital speed setting and display of gap width

Large collection receptacle (3 l) with optional lid

ZERO POINT ADJUSTMENT

An advantage of the jaw crusher BB 50 is the so-called zero point adjustment. Sooner or later, the breaking jaws will show signs of wear which will affect the reproducibility of the size reduction process. This effect can be compensated by adjusting the zero point. A sign in the display indicates if the jaws need to be replaced altogether, thus helping to avoid damages to the crusher.

EASY OPERATION & CLEANING

Working with the BB 50 jaw crusher is easy and safe. The large, clearly structured operating panel allows for digital display of parameters such as gap width and speed. The sample material is conveniently fed to the crusher via the large hopper equipped with splash-back protection.

For easy cleaning the fold-back hopper and crusher arm can be removed without using tools. The user can also exchange the breaking jaws if the crusher needs to be converted for different applications.

FOR SAFE AND EFFICIENT CRUSHING PROCESSES

ACCESSORIES FOR THE JAW CRUSHER BB 50

Breaking jaws and wearing plates are available in five different materials to be selected depending on the sample and the analysis to be carried out:

- | manganstål
- | rustfritt stål
- | wolframkarbid
- | zirkoniumoksid
- | stål for tungmetallfri nedmaling

The optional lid for the collecting receptacle of the jaw crusher ensures that the fine residues from previous samples fall on the lid and not into the receptacle which helps to avoid cross contaminations.

KJEFTEKNUSER BB 50

VIRKEMÅTE

Kjefteknuseren BB 50 er en robust og effektiv kjefteknuser med enkelt svinghjul. Matematerialet passerer gjennom den tilbakeslagssikre trakten og går ned i knusekammeret.

Knusingen skjer i den kileformede sjakten mellom den faste og den bevegelige knusearmen, som styres av det eksentriske staget. Den eliptiske bevegelsen gjør at materialet utsettes for trykk og føres nedover.

Når materialet er finere enn den innstilte malespalten, faller det ned i en uttagbar oppsamlingsbeholder. Den trinnløse spalteinstillingen kombinert med det digitale spalteåpning-displayet sikrer en optimal innstilling for å fremstille den ønskede sluttfinheten for prøven.
